military hospitals in those districts. The hospital consists of three buildings and a clinic where officers and their families receive ambulatory treatment, and has the following specialist departments:

- a. Internal diseases;
- b. Surgical;
- c. Skin diseases;
- d. Eye, ear, nose and throat diseases;
- e. Dentistry; and
- f. Physiotherapy.
- 4. Shumen also has a clinic for tuberculosis patients and a general clinic. The clinic for tuberculosis patients, with 20 beds, is to be enlarged to 40-bed capacity when funds are available. It employs eight physicians and is one of the few medical institutions in Bulgaria where lung surgery is performed.
- 5. Semi-officially, the proportion of tuberculosis patients in Bulgaria is given as two and one-half percent. This estimate is believed to be too low, partly because the poor educational level of a large section of the population makes it difficult to detect cases of the disease, and partly because the health authorities do not wish to admit the gravity of the situation. Since 1950, a large-scale effort has been made to bring all tuberculosis cases under supervision. The tuberculosis clinics and public health stations have administered Pirquet-Montaux tests to children up to 18 years of age, with a Calmette test for all those with a negative reaction to the first examination. In 1953, all persons up to 30 years of age could undergo the tests. Tuberculosis patients without means receive additional food and clothing without charge from special funds in each locality.
- 6. According to new regulations every physician must work for six hours a day in a government medical institution. Internal disease specialists spend two hours each at a hospital, clinic, and district health station in the city, and make visits to the homes of the patients.

		visits to the homes of the patients.
